chain immunoglobulin amino acid sequence;

```
This sequence represents a polynucleotide used in the preparation of the antibodies of the invention. The invention relates to the production of an anti-HIV (human immunodeficiency virus) glycoprotein (gp)-120 monoclonal antibody capable of reducing an HIV infectivity titre in an in vitro virus infectivity assay by 50% at a concentration of less than for gymunor the production of the antibody comprises:

(a) providing a first polynucleotide encoding a heavy chain immunoglobulin amino acid sequence (which does not comprise the sequence represented by AAY98206) and a second polynucleotide encoding a light

immunoglobulin amino acid sequences from the host cell.
The anti-HIV gp-120 monoclonal antibody is used for providing passive
Immunoglobulin amino acid sequences from the host cell.
The anti-HIV gp-120 monoclonal antibody is used for providing passive
Immunotherapy to HIV in a human. They can be administered to high-risk
patients to reduce the likelihood and/or severity of HIV-induced disease
and to patients who are already HIV-infected. The antibodies are used
for neutralising field isolates which provides information about the
immunocompetence of an immune response in HIV patients, for detecting
HIV in a biological fluid or tissue sample e.g. by radioimmunoassay, for
producing anti-idiotypic antibodies which can be used for active
immunisation and to screen human monoclonal antibodies to identify those
with the same binding specificity and to monitor the course of HIV disease therapy by measuring the changes in concentration of HIV present
in the body or in body fluids by immunoassay. The anti-HIV gp-120
monoclonal antibodies are encoded by a human polymulectied sequence and
when used in vivo for diagnosis and immunotherapy of HIV-induced disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ó
                      inserting the first and second polynucleotide sequences into a host
                                                           (c) maintaining the host cell in conditions which allow the amino acid sequences encoded by the polynucleotides to be expressed in the host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           6330

immunoglobulin amino acid sequences from the host cell.

The anti-HIV gp-120 monoclonal antibody is used for providing passive immunotherapy to HIV in a human. They can be administered to high-risk patients to reduce the likelihood and/or severity of HIV-induced disease and to patients who are already HIV-infected. The antibodies are used for neutralising field isolates which provides information about the immunocompetence of an immune response in HIV patients, for detecting HIV in a biological fluid or tissue sample e.g. by radioimmunoassay, for producing anti-idiotypic antibodies which can be used for active immunisation and to screen human monoclonal antibodies to identify those with the same binding specificity and to monitor the course of HIV present in the body or in body fluids by immunoassay. The anti-HIV gp-120 monoclonal antibodies are encoded by a human polynucleotide sequence and when used in vivo for diagnosis and immunotherapy of HIV-induced disease
                                                                                                                                                                                                                                                                                                                                       This sequence represents a polynucleotide used in the preparation of the antibodies of the invention. The invention relates to the production of an anti-law (human immunodeficiency virus) glycoprotein (gp)-120 monoclonal antibody capable of reducing an HIV infectivity titre in an in vitro virus infectivity asay by 50% at a concentration of less than 70 mg/ml. The method for the production of the antibody comprises:

(a) providing a first polynucleotide encoding a heavy chain immunoglobulin amino acid sequence (which does not comprise the sequence represented by AAX98206) and a second polynucleotide encoding a light chain immunoglobulin amino acid sequence;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (b) inserting the first and second polynucleotide sequences into a host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (c) maintaining the host cell in conditions which allow the amino adsequences encoded by the polynucleotides to be expressed in the host
Human neutralizing monoclonal antibodies to human immunodeficiency virus (HIV) used for providing passive immunotherapy to HIV are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       associated with monoclonal antibodies of xenogeneic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                reduce the problems of significant host immune response to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   chimeric derivation
```

```
This DNA sequence comprises a minimal colE1 origin of replication isolated from vector pVR327 by digestion with BstY1 and AvaI. Novel humanised vectors of the invention (see AAV21724, AAV21727 and AAV21732-34) comprise a human-derived promoter or mammalian homologue which is functional in a mammalian target tissue and cells and an acceptance site which accepts CNA products from RT-PCR cloning. They also contain minimal non-human components that are necessary for production of the vector. The colE1 replication origin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          anised polynucleotide vectors - comprising human derived promoter sequence acceptance site, used for the production of vaccines % \left( 1\right) =\left\{ 1\right\} =\left\{

                                                                                                                                                                                                                                                                                          provides plasmid replication and growth within permissive strains of Escherichia coli. The novel vectors are used to express target antigens, especially tumour antigens. They are non-replicating in mammalian cells but are capable of extended stable expression of target sequences generating an immune response in immunised individuals. The vectors selectively elicit immune responses to the target sequences with little or no immune response to the other components of the vectors. The target antigens are expressed as intracellular polypeptides or peptides and, as such, are processed as self polypeptides or peptides and appropriately presented on antigen presenting cells.
                                                                                                                                                                                                                                                                                                                                                              CTGCTAATCCTGTTACCAGTGGCTGCTGCCAGTGGCGATAAGTCGTGTTTACCGGGTTG

CAT cDNA with flanking non-coding sequences from influenza viral RNA segments, inserted in antisense orientation between murine rDNA segments, inserted in antisense orientation between murine rDNA promoter and terminators sequences. The CAT reporter gene replaces a haemagolutinin coding sequencing, retaining viral 5' and 3' cuntranslated sequences, which cooperatively constitute the vRNA untranslated sequences, which cooperatively constitute the vRNA constructs and subsequently with helper influence affected with mutated constructs and subsequently with helper influence affected activity. A double mutant (G3A, UBC) resulted in significant CAT activity, while a triple mutant (G3A, UBC) resulted in viruses with greatly enhanced expression rates. This may be utilized in viral vaccine vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               gactcaagacgatagttaccggataaggcgcagcggtcgggctgaacggggggttcgtgc 1798

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                             It is the nucleotide sequence of the plasmid pBG394. The sequence was isolated from 2 libraries: a lamda qt cDNA library derived from T cell tumour line REX and a lamda gtl.0 cDNA library derived from peripheral blood lymphocyes (PBL). For screening, a series of chemically synthesized antisense oligonucleotide DNA probes based on the known T4 protein sequence was used. The polypebtide encoded is useful in immunotherapeutic, prophylactic and diagnostic compsns. It can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      3796

```
It is the nucleotide sequence of the plasmid pBG395. The sequence was isolated from 2 libraries: a lamda gt cDNA library derived from T cell tumour line REX and a lamda gtl0 cDNA library derived from T peripheral blood lymphicoyes (PBL). For screening, a series of chemically synthesised antisense oligonucleotide DNA probes based on the known T4 protein sequence was used. The polypeptide encoded is useful in immunotherapeutic, prophylactic and diagnostic compsns. It can be used to purify HIV from a sample.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 156, A Sequence 170, A Sequence 170, A Sequence 170, A Sequence 9, App Sequence 1, App Sequence 12, App Sequence 12, App Sequence 1,

Patent No. 5652138
GENERAL INFORMATION:
APPLICANT: Burton, Dennis R
APPLICANT: Lerner, Richard R
TITLE OF INVENTION: HUMAN NEUTRALIZING MONOCLONAL ANTIBODIES
TITLE OF INVENTION: TO HUMAN IMMUNOBFICIENCY VIRUS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ADDRESSEE: The Scripps Research Institute, Office of ADDRESSEE: Patent Counsel STREET: 10666 No. 5652138th Torrey Pines Road, Suite 220, STREET: Mail Drop TPC8

polylinker; Site=1: EcoRI; Site=2: NotI; sequenced from
polylinker; Asite=1: EcoRI; Site=2: NotI; sequenced from
forward priming site which reads from the 3' end of the
cDNA. The 4A3A is a directionally cloned and normalized
cDNA library that was constructed from the 4A3A cell line
oligo-T primed cDNA according to: Bonaldo, Lennon & Soares
(1996): Normalization and Subtraction: Two approaches To
Facilitate Gene Discovery, Genome Research 6, 791-806."
